31 October 2022

Dear Sir/Madam,

**Incident no. 20220120-1333**

Please find enclosed 2 newspaper articles and **Exhibits (MJS01 to MJS34)** to add to evidence which has already been submitted, since 20 January 2022, in regard to the above incident number.

Both newspaper articles report deaths in Scotland, in 2021, shortly after COVID-19 vaccination – that of 20-year-old Luke Garrett who died 9 February 2021 within 12 hours of being injected with COVID-19 Pfizer-BioNtech pharmaceutical drug and that of Karen Tully who was found dead within 48 hours of being injected with a COVID-19 AstraZeneca pharmaceutical drug.

**Exhibit MJS02** (page 9 of 29) explains the four phases of clinical drug trials. At the completion of Phase 2 (when these COVID-19 drugs were released under “emergency use” onto the general public) they had NOT been tested in combination with any other drugs.

Luke Garrett and Karen Tully were both on the NHS official shielding list. In the Daily Mail (MAILONLINE) article Luke’s mother is quoted as saying, “*He was on heart drugs that were just as a preventative measure.*”

No one, prior to having a syringe plunged into their arm, is being told they are participating in Phase 3 drug trials. No one taking drugs for existing conditions is being told COVID-19 drugs have not been tested in combination with other drugs. Therefore NO ONE HAS GIVEN INFORMED CONSENT.

**PEOPLE LIVING WITH CHRONIC HEALTH CONDITIONS – ADVERSE REACTIONS / NO INFORMED CONSENT**

People living with chronic health conditions will almost certainly be taking other prescription drugs – drugs NOT tested in combination with COVID-19 drugs prior to being quirted into their arm.

A Health Psychologist in Glasgow (name and contact details provided on request), is conducting a scoping project to identify adverse events after receiving COVID-19 vaccinations to people living with chronic health conditions. The Health Psychologist reported to Police (Scotland) Angels that all participants who responded (69 to date) did not receive informed consent prior to the vaccination (average number of vaccinations - 3). And a Chartered Accountant working with the Health Psychologist reported all 69 individuals did not receive either a letter notifying them of informed consent nor did they receive a consent form. In addition, they did not have a conversation with their

GP, nurse or vaccinator about informed consent and noone reported being offered a consent form to sign, prior to being vaccinated.

Experimenting on people without informed consent IS A CRIME.

Please provide me with a progression update of what inquiries you have made to date in relation to incident report 20220120-1333? To date we have received nothing. Do you investigate crimes or do you not?

Yours faithfully

Moira Brown

Police (Scotland) Angels
